

### Getting Started

Login to your website and navigate to a page where you have editing privileges. This is obvious because there will be an 'Edit Page' link in the upper right hand corner of the main body - just below any navigation or headers on the site.

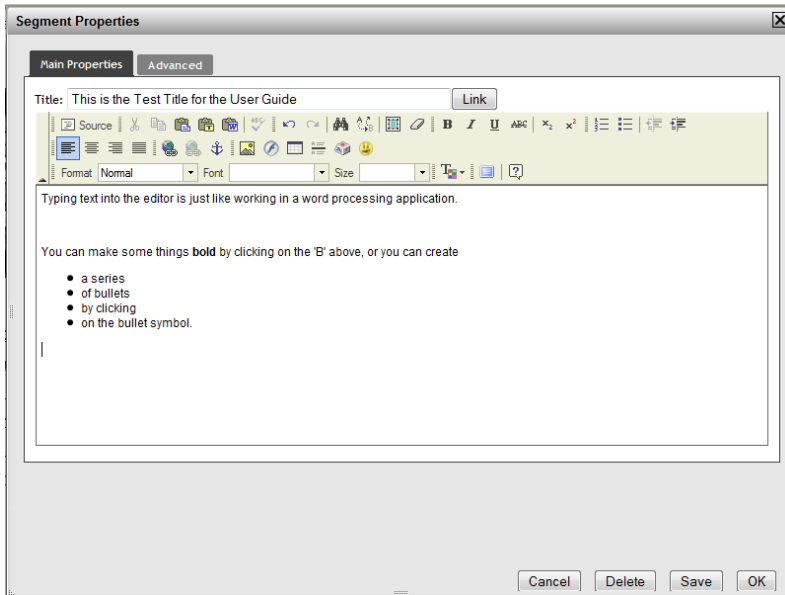

### Adding a Segment

To add a segment follow the following process:

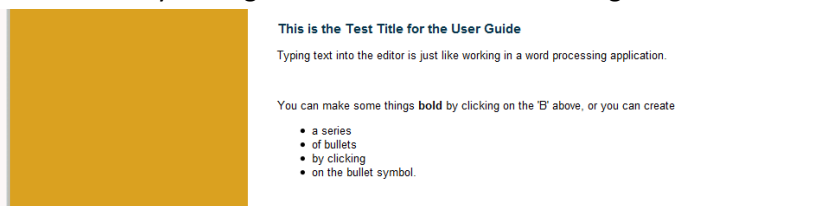

1. Click on the Edit Page link and then on the Add New Segment link (This link is visible only after you have selected edit page and shows up in the same general area.)
2. Select the Text Option from the drop-down and press OK.

3. Type in a Title in the Title Section and type text into the text box using the Segment Properties editor.

4. Press OK and your segment will be saved. You can ignore the 'save' button.

Notice that the segment automatically was saved in the large white region, not on the sidebar.
